

KoACT[®]

A better formula for healthy bones

Dual-action KoACT supports increased bone mineral density and flexibility for stronger bones*.

Traditional calcium supplements may help strengthen bones, but they don't do enough to support bone flexibility. Like a rigid structure in an earthquake, bones that have lost flexibility crack, shatter and break.

Including collagen with calcium to support bones' strength, flexibility and power to withstand impact is the key. KoACT's exciting new formulation of chelated calcium and collagen increased bone mineral density and built stronger, more flexible bones in a university study**.

Optimal bone health requires strength and flexibility. Do more to help your bones with KoACT. **Learn more at www.KoACT.net**

To order KoACT samples or to purchase any AIDP beneficial products, please contact our customer care department. We're here to assist with your raw material needs and requirements.
